SUMMARY

Data Analyst with 2+ years of experience using SQL, Python, Power BI, and Azure Data Factory to transform and analyze data, develop KPI reporting, and support data-driven decision-making. Experienced in exploratory analysis, data quality, dashboard development, data transformation, and automated reporting workflows, with hands-on Snowflake experience through analytics projects. Master's in Management Information Systems with published research in applied analytics and recipient of the Best Research-in-Progress Paper Award at MWAIS 2026.

TECHNICAL SKILLS

- **Data Analysis:** SQL (CTEs, Window Functions, Joins, Query Optimization), Python (Pandas, NumPy, scikit-learn), Exploratory Data Analysis, Statistical Analysis, K-means Clustering, Data Quality
- **Business Intelligence:** Tableau, Power BI, Looker Studio, Excel, Power Query, KPI Development, Data Visualization
- **Data & Cloud:** Snowflake, Azure Data Factory, dbt Core, ETL/ELT, Data Transformation, Data Modeling
- **Tools & Methodologies:** Git, CI/CD, Agile-Scrum, UAT, Technical Documentation

EXPERIENCE

Data Research Assistant • *University of Illinois, Springfield* • *Springfield, Illinois* Oct 2024 - May 2026

- Conducted spatial segmentation analysis on 3,322 census block groups from the EPA Smart Location Database, applying K-means clustering to identify a Transit-Walkability Gap affecting 53% of the Chicago metropolitan area neighborhoods.
- Built an end-to-end Python pipeline incorporating feature selection, z-score standardization, and one-way ANOVA validation, optimizing model stability by identifying and removing multicollinear variables.
- Generated publication-quality spatial maps using GeoPandas and Matplotlib, visualizing cluster distributions across the Chicago–Naperville–Elgin CBSA.
- Co-authored a peer-reviewed research paper published in the MWAIS 2026 Conference Proceedings and received the Best Research-in-Progress Paper Award at the 21st Annual Midwest Association for Information Systems Conference, Athens, Ohio.

Associate Application Developer - Data & Analytics • *Accenture* • *Pune, India* Apr 2023 - Jul 2024

- Analyzed and transformed data from 5+ heterogeneous sources to support reliable reporting and business intelligence, improving data ingestion reliability by 15% through validation and profiling.
- Developed and optimized SQL transformations within ADF workflows, reducing query execution latency by 10% and producing KPI-ready datasets for executive reporting dashboards.
- Built automated reporting and data processing workflows that reduced recurring data-quality anomalies by approximately 15%, improving consistency of analytical outputs.
- Collaborated with cross-functional technical and business teams during bi-weekly production releases, providing UAT support, participating in code reviews, and validating data and reporting changes.
- Applied Git, CI/CD, and Agile/Scrum practices to support reliable deployment of analytics solutions while maintaining technical documentation and SOPs.

PROJECTS

CTA Performance Analytics Platform

- Analyzed 11.1 billion Chicago Transit Authority rides spanning 25 years using Python, Pandas, and SQL to identify long-term ridership patterns, including a 57% COVID-driven ridership drop and subsequent recovery trajectories.
- Quantified bus vs. rail recovery gap post-COVID, finding rail ridership remained ~37% below 2019 levels by 2025 compared to ~16% for bus, surfacing structural shifts in commuter behavior.
- Built an end-to-end Python ETL pipeline ingesting 9,190 records from the Chicago Data Portal REST API into a Snowflake cloud data warehouse and deployed an interactive Plotly Dash dashboard with 4 dynamic visualizations to Render cloud hosting.

Olist E-Commerce Analytics Platform

- Engineered a Python ingestion pipeline loading ~1.5M rows across 9 relational CSVs into Snowflake RAW schema using snowflake-connector-python and write_pandas.
- Architected a three-layer Snowflake medallion structure using dbt Core, 8 staging views for standardization and type casting, 3 mart tables answering business questions on seller segmentation, delivery performance, and product category economics.
- Delivered 3 Looker Studio dashboards surfacing \$13.7M platform revenue, 91.9% on-time delivery rate, and freight burden analysis across 74 product categories.

EDUCATION

University of Illinois Springfield • *Master's in Management Information Systems*

May 2026

Honours: Beta Gamma Sigma (BGS) Honor Society Inductee - Top academic achiever, AACSB-accredited programs
